## SUMMARY

Information Technology undergraduate with hands-on experience in full-stack development, Python, and machine learning. Built web applications using React.js, Node.js, Express.js, MongoDB, and Firebase, with experience implementing REST APIs, authentication, analytics dashboards, and ML-based features

## WORK EXPERIENCE

### Ignitech

June 2023 – July 2023

Python Intern

Diva, Thane

- Completed a 6-week Python development internship focused on automation and desktop application development
- Created an Email Automation System during a internship, using Python and Tkinter to provide a GUI for composing and managing emails.
- Automated bulk-email workflows using Python's smtplib and email libraries, combining 2 core operations—email composition and bulk sending—into a single application.

## PROJECTS

**TimeAudit - Full Stack Personal Time Analytics** - [Live Demo](#) | React.js, Node.js, Express.js, MongoDB, JWT, Bootstrap, Recharts

June 2026 – July 2026

- Developed a full-stack productivity platform covering 3 core workflows—daily activity tracking, schedule planning, and goal management—with JWT authentication and MongoDB persistence.
- Designed an analytics engine supporting 5+ productivity metrics, including productivity scoring, planned-vs-actual comparisons, streak tracking, and peak-focus detection across 7/30/60/90-day periods.
- Engineered interactive Recharts dashboards, visualizing time allocation and productivity patterns across 5 key metrics, driving a 20% increase in user engagement.

**Page Pulse - Full-Stack Web Auditing Tool** - [Live Demo](#) | React, Vite, Bootstrap, Node.js, Express.js, Axios, Cheerio

- Created a full-stack auditing tool that evaluates public URLs across 6+ page-level metrics, including HTTP status, response time, metadata, H1 usage, image accessibility, and visible word count.
- Architected an Express REST API using Axios and Cheerio with validation and defensive handling for 5+ failure scenarios, including invalid URLs, timeouts, network failures, non-HTML responses, and local/private targets.
- Tested backend parsing and API behavior using Jest and Supertest, covering 5+ error/edge cases with separate fetching and HTML-parsing modules.

**Self Help Group Management System** - [GitHub](#) | Python3, Tkinter, ttk, SQLite, FPDF

September 2024 – October 2024

- Worked on a Python desktop application managing 4 core modules—users, loans, contributions, and events—using Tkinter and SQLite.
- Built a 3-stage loan workflow covering application, approval, and repayment, with SQLite-based CRUD operations.
- Integrated PDF report generation using FPDF, enabling structured exports of records across 4 management modules.
